Hybrid Learning of Daviq.com
in the Subject of Teaching Listening and Speaking

Daviq Rizal
UIN Walisongo Semarang
daviqr@walisongo.ac.id

Abstract
The term hybrid learning was used to describe online learning combined with face-to-face interaction in the classroom. There are two research questions. The first question is how the development of hybrid learning in http://daviqr.com/ is. The second one is how the moodle-based hybrid learning of http://daviqr.com/ as a teaching model in the subject of teaching listening and speaking to the students of English Department of IAIN Walisongo Semarang in the academic year of 2013/2014 is.

This research is a research and development, which has the population of all fourth semester English department students of the Faculty of Teachers' Training and Education, IAIN Walisongo Semarang that takes the subject of Teaching Listening and Speaking in the academic year 2013/2014, which consists of three classes. The number of population is 120 students.

In terms of the research findings that there are some main reasons why most students agree that the hybrid learning course is an interesting course and why they prefer the hybrid online course or the combination between online and traditional classroom. First, the course outline and objectives were made clear. Second, they learned a lot from this hybrid course. Third, the reading materials were clear and informative. Fourth, the level of this hybrid course is just right. Fifth, the total study load of this hybrid course is in proportion to the number of semester credits is just right. Sixth, the amount of their interaction with other students is a little better. Seventh, the quality of their interaction with other students is a little better. Eighth, the amount of their interaction with the instructor is a little better. Ninth, the quality of their interaction with the instructor is a little better and about the same. Tenth, compared to a face-to-face (traditional) class of equal credits, the workload of this online course is somewhat more.

There are some recommendations I should give. First, UIN Walisongo Semarang must design e-learning for lecturers as many students like hybrid courses. Second, the faculty must improve the quality of Wi-Fi hotspots.

Keyword: hybrid learning; face-to-face interaction; course outline; combination;

A. Background
Hybrid learning, a combination of multimedia technology, CD ROM video streaming, virtual classrooms, voicemail, email and conference
calls and online text animation and video streaming\(^1\), is a new trend in some universities in Indonesia including IAIN Walisongo Semarang. Hybrid learning, in fact, helps the face-to-face setting in the classroom. Since February until August 2011 Tarbiyah faculty of IAIN Walisongo Semarang in association with DBE2 Semarang tried out an online learning on six subjects namely Computer-Assisted Language Learning, Cell Biology, Study Methodology of Islam, Environmental Chemistry, History of Islamic Civilization and Arabic Language Study in DBE2 website http://ptkonline.org. However, since DBE2 programs were closed, the implementation of online learning in FITK ended. To solve the problems, the moodle-based website was created in http://daviqr.com to teach some of my subjects such as discourse study, computer-assisted language learning and teaching listening and speaking.

Hybrid learning refers to the intentional use of networked information and communication technology in teaching and learning. Allison Littlejohn and Chris Pegler further explained that hybrid learning has several definitions. First, it is an access to a wide choice of resources on your personal computer. Second, it is an online studying with facilitators within a course. Third, it is an activity of downloading content to mobile devices, using podcast and e-books as resources\(^2\). Hybrid learning includes e-learning in which there are other terms to describe e-learning such as online learning, virtual learning, distributed learning, network and web-based learning. Basically they refer to the same thing, that is, educational processes that utilize information and communication technology to mediate asynchronous and synchronous learning and teaching activities. The term hybrid learning has a wider scope than online, virtual, distributed, networked or web-based learning. It stands for electronic learning. It incorporate all educational activities of individuals or groups working offline or online\(^3\).

The term hybrid learning was used to describe online learning combined with additional solutions such as mentoring, training, etc. Hybrid learning can take many forms such as conducting a new employee orientation in a classroom followed up with e-mails and electronic checklists, holding traditional workshops or seminars combined with e-mail

---

\(^1\) Kaye Thorne, *Hybrid learning: How to Integrate Online and Traditional Learning* (USA: Kogan page, 2003), p. 16  
dialogues to answer questions, providing classroom instruction on a new
computer software, followed by job training and so forths⁴.

Hybrid learning is similar to online learning, which is significant
for economic advancement both for individuals and society. As today’s
economy is dependent on a labor force, the labor force can continue to learn
the necessary training through online learning. It happens in response with
the changing economy. Workers need to learn new skills and online
learning is the solution in response to a society’s need for lifelong rapid
learning⁵.

However, online learning deals with anything delivered, enabled, or
mediated by electronic technology for the purpose of learning. This
definition also excludes non-electronic things such as books and paper-
based correspondence. It includes web-based learning and computer-based
training as they occur in learning communities⁶.

Moreover, online learning is a generic term describing the
integration of information and communications technology into learning
and teaching both on and off campus. This method has been adopted to
students who are unable to attend on campus. Online learning can range
from static pages of web sites displayed on the Internet to complex
multimedia interactive productions and can include online discussion
groups. However, most sites promoted individual rather than collaborative
learning, instruction rather than inquiry, clicking rather than communicating
and automatic feedback rather than guidance and memorization rather than
knowledge construction⁷.

As the university lecturers are required to go beyond selecting a
textbook for their students, the exploration of hybrid learning is essential.
hybrid learning can enrich their teaching and learning experiences through
online environments. The weakness of online learning is on the lack of fact-
to-face contact. Hence, it has resulted in the mix of hybrid learning and
traditional conventional classroom, widely known as hybrid learning⁸.

Jurnal Vision, Volume 6 Number 2, 2017
In brief, hybrid learning is an integration of various techniques of teaching and learning, in which it combines the face-to-face interaction in the classroom and online learning using moodle-based web sites. In each session, students might have three features in their moodle-based websites in all subjects including the subject of teaching listening and speaking such as online reading materials, online discussion forum, quiz or assignment.

The research questions will be systematized as follows.

1. How is the development of moodle-based hybrid learning in http://daviqr.com/?

2. How is the moodle-based hybrid learning of http://daviqr.com/ as a teaching model in the subject of teaching listening and speaking to the students of English Department of IAIN Walisongo Semarang in the academic year of 2013/2014?

B. Review of Related Literature

1. Discussion Forums

Discussion forums are a powerful communication tool within a blended Moodle course. In discussion forum, there are message boards where the lecturer and his students can post messages to each other while easily keeping track of individual conversations. Forums are the primary tool for online discussion and are the central organizing feature in the hybrid online course.

Forums allow the lecturer and students to communicate with each other at any time, from anywhere with an Internet connection. Students don’t have to be logged in at the same time to communicate with you or their classmates. The technical term for this type of communication is asynchronous or “not at the same time.” Asynchronous communications are contrasted with synchronous forms such as chat rooms, instant messaging, or face-to-face conversations.

Because forums are asynchronous, students can get their time composing replies. They can sketch and redraft until they are pleased with the results instead of feeling under pressure to reply instantly. The asynchronous nature of the forums creates many opportunities for students not only to duplicate the conversations you have in class, but also to produce totally new activities that are difficult in a classroom setting.  

2. Quiz

Evaluation on students’ performance is a critical part of a learning environment, and assessment is one of the most important

---

activities in education. As lecturers, we can’t tell what’s going on inside students’ heads, so we need a way for them to demonstrate what they comprehend and what they don’t. A well-made test, even a multiple-choice test, can give you valuable information about students’ misconceptions. If the feedback is rapid enough, it can also be a critical tool for students to measure their own performance and help them become more successful.

Moodle’s quiz module is one of the most complex pieces of the system. The community has added a large number of options and tools to the quiz engine, making it extremely flexible. You can create quizzes with different question types, randomly generate quizzes from pools of questions, letting students re-take quizzes multiple times, and get the computer score everything.

These features signal a number of strategies that usually aren’t practical with paper-based testing. It’s hard enough to score one batch of quizzes, and nearly impossible to score it 10 times for each student. When the computer does the work for you, it is not hard to give students a chance to practice taking a test or give frequent small quizzes.

Moodle quizzes contain two major components: the quiz body and the question pools. Quiz bodies act as containers for various types of questions from the question pools. The body is what students see when they take the evaluation. It also defines how the students work with the quiz. The questions in a quiz body can be of any kind, selected manually or at random, and displayed in a set or random order. The question pools can have questions arranged in a manner that makes sense to you. Pools can be reused in multiple quizzes, shared between classes and courses, and even moved between systems.10

3. Survey

Moodle has two tools for collecting feedback from the students: surveys and choices. A survey is a set of prearranged questions. Yet, it’s not possible to create your own questions in a survey if you do not install a nonstandard module such as Questionnaire or Feedback. Getting feedback from students about the nature of the course is focused on by the current survey.

Choices are small, one-question surveys, which act as small web polls that you may have seen on other web sites. You can use a choice to obtain rapid feedback from your students about any topic you desire, as long as it’s only one question long.

There are three types of surveys in Moodle. First, COLLES ( Constructivist On-Line Learning Environment Survey) is a set of 24 statements that asks students about the relevance of the course, provides opportunities for reflection and interactivity, provides peer and tutor support, and facilitates interpretation. These factors are based on social constructivist theory. Variations on the survey ask students to talk about their actual learning environment or the preferred learning environment.

Moodle offers three types of COLLES surveys namely preferred, actual, or a combination of the two. The preferred COLLES survey asks students to discuss how they believe they want to interact with a course, while the actual COLLES survey asks them how they are interacting at present.

ATTLS (Attitudes to Thinking and Learning Survey) ATTLS seeks to determine the quality of interaction within a course, which builds on the “Separate and Connected ways of knowing” scale. The Critical Incidents survey asks students to reflect on recent events and reply questions about their relationship to those events\(^\text{11}\).

4. Assignment

Assignments are an extremely easy method for collecting student work. They are a simple and flexible catch-all for things you want to grade. The assignment module gives you an easy way to let students upload digital content for grading. Students can be asked to submit essays, spreadsheets, presentations, web pages, photographs, or small audio or video clips. Anything they can save on their hard drives can be submitted in response to an assignment.

Assignments don’t have to consist of file uploads. You can create offline assignments they need to complete. Alternatively, you can ask students to answer directly into the assignment itself.

Assignments are a useful tool you can utilize in creative ways to gather more authentic responses from your students than is possible with the quiz engine\(^\text{12}\).

C. Blended Learning

1. Hybrid learning

The hybrid learning is a kind of education, which combines various model of face-to-face interaction and distance education model

by using all the facilities of technology. In other words, it is the combination of face to face and online learning. The hybrid learning also combines the strongest sides of the face to face and web supported education.

The first thing decided when designing a hybrid learning environment is the determination of the topic part used in hybrid learning and the part that will be used in the classroom. The most common practice was merging the topic half to half. The levels of the face to face and online supports is dependent not only the on the decision of the applier but also on the physical conditions. The application level of the online methods determines the content presented and the balance between the learning methods. LMS (Learning Management System) is the most suitable method for the transfer of the contents to the face to face method, which otherwise is very difficult to present and enables us to repeat the content depending upon the learning level and facilitates the online submission of the texts. The information repeated determines the extent of the face to face and on line applications in the blended process\textsuperscript{13}.

2. **Hybrid learning Models**

The use of the term hybrid learning is not relatively old in both higher education and corporate settings. In higher education, the term “hybrid course” was often used prior to the appearance of the term “hybrid learning,” and now the two terms are used interchangeably. Because the term is relatively new, there are still ongoing debates regarding the precise meaning and relevance of the term. This definition highlights the ongoing union of two model learning environments: the traditional face-to-face environment with the technology-mediated environment.

\textsuperscript{13} Dikmenli, Yurdal and Unaldi UE, *The Effect of the Hybrid learning Environment and the Application of Virtual Class upon the Achievement and the Attitude against the Geography Course* in Mevlana International Journal of Education Vol. 3 (2), 1 August 2013, Available online at http://mije.mevlana.edu.tr/
Figure 1. Hybrid learning

There are many reasons why a blended approach is selected. The three most common reasons for blending are to increase learning effectiveness, to increase convenience and access and to increase cost effectiveness. Often lecturers adopt a blended approach to explore balances between more than one of these goals simultaneously. Hybrid learning is interesting to many people because it enables one to take advantage of the best of both models namely traditional course and online course. Hybrid learning environment can also mix the least effective methods of both models if not well designed.

The concept of hybrid learning is simple and interesting. Nevertheless, there are many ways that hybrid learning can be implemented in a variety of different contexts. For this reason, it is important to share successful models of hybrid learning so that all can benefit. Sharing models of hybrid learning can help to facilitate the purposeful and disciplined implementation of appropriate hybrid learning strategies. This section of the article will present several models of hybrid learning. Because of space constraints it is not possible to share all of the details of the models, but a rich set of references is provided that will allow the reader to find additional details for the examples of interest.

It is necessary to understand that blending occurs at many different levels including the institutional level, the program level, the course level, and the activity level. Naturally, models at the course and activity levels have instructor stakeholders who are mainly interested in issues of learning effectiveness and productivity. Hybrid learning that occurs at the program and institutional levels typically has administrator stakeholders who are often determined by issues of cost effectiveness and expanding access of the learning to available audiences.
Figure 2. Different Levels of Hybrid learning

It is difficult to predict what the future holds for hybrid learning environments. It is possible that the use of hybrid learning in both higher education and corporate contexts will keep on growing. In fact, there may come a time when the traditional learning environment is mainly a hybrid learning environment and it no longer makes sense to use the adjective “blended.”. Rather than they focus on whether blending is happening or not, universities will focus more on the quality of the hybrid learning and find out how faculty can be trained and supported to teach in hybrid learning environments\textsuperscript{14}.

Finally, Bonk, Kim and Zeng make 10 predictions related to hybrid learning in the future:
\begin{itemize}
\item[a.] The use of mobile devices in hybrid learning increased.
\item[b.] The use of visualization tools and hand-on learning in hybrid learning greater.
\item[c.] The learner input in the design of their own learning programs increases.
\item[d.] The connectedness, community, and collaboration increases.
\item[e.] The authenticity and on-demand learning increases.
\item[f.] The ties between work and learning are stronger.
\item[g.] Calendaring system will need modifying and be more flexible.
\item[h.] Programs will commence to include hybrid learning course designations.
\item[i.] Instructor roles will gradually move toward that of mentor, coach and counselor
\end{itemize}

j. Hybrid learning specialist teaching certificates will appear\textsuperscript{15}.

3. Characteristics of Hybrid learning Course

In terms of hybrid learning course, there are benefits and challenges of hybrid learning. There are two major groups: student perspective and student challenges. In student perspective there are some advantages.

A. Benefits

Students involved in hybrid learning courses are generally very positive about their experiences. The main reason that students gave for their high level of satisfaction was the time flexibility provided by a hybrid learning.

B. Time Flexibility

Time flexibility is defined as the skill to control the pace of one’s learning, the convenience of scheduling coursework and the decrease in time spent commuting. Students liked the hybrid learning because it provided them with the flexibility to work from home. Working from home was more positive than working from other locations. The hybrid learning also provided them with a greater range of course scheduling options because of the face-to-face class time.

C. Improved student learning outcomes

Several research studies showed that hybrid learning designs contribute to improved learning outcomes for students. At the University of Wisconsin in Milwaukee students learn more in blended courses than they do in traditional courses. Students wrote better papers, performed better on exams, produced higher quality projects and were capable of more important discussions on course material.

Besides student perspective, there are student challenges as well. First, students new to hybrid learning spend more time in traditional classes than online courses. Moreover, they do not spend in lectures as work, but they see time spend online as work. Second, time management is struggling. Online activities are required to be completed between the face-to-face classes. Third, responsibility for learning can be very difficult for students accustomed to be passive leaners within a traditional classroom. Initially students are unprepared for the active learning role they must play in a blended course. Fourth, most technology related problems usually occur within the first weeks of the

Jurnal Vision, Volume 6 Number 2, 2017
semester or during orientation meetings of online courses. These problems include the procedure for accessing the online components such as web site address and logon information\textsuperscript{16}.

D. Research Methodology

1. Research Approaches

This research is a research and development. Research and development (R&D) is also recognized in Europe as research and technical (or technological) development (RTD), which is a broad term for a activities related to the enterprise of corporate or governmental innovation. The activities classified as R&D vary from company to company, but there are two primary models, with an R&D department being either staffed by engineers and tasked with directly developing new products, or staffed with industrial scientists and tasked with applied research in scientific or technological fields which may assist future product development. R&D differs from the vast majority of corporate activities in that it is not often intended to make immediate profit, and generally carries greater risk and an uncertain return on investment.

2. Time and Place

a. Time

This research will be conducted in the academic year of 2013/2014.

b. Place

It will be conducted in some classes: TBI 4A, TBI 4B, TBI 4C of the English Department of IAIN Walisongo Semarang as it has the subject of Teaching Listening and Speaking in daviqr.com.

3. Population and Sample

a. Population

The population is all fourth semester English department students of the Faculty of Teachers’ Training and Education, IAIN Walisongo Semarang that takes the subject of Teaching Listening and Speaking in the academic year 2013/2014, which consists of three classes. The number of population is 120 students.

b. Sample

As the number of the population is 120, the purposive sampling is used. The sampled participants will be chosen from those, who participate actively in 2 features of daviqr.com: the

\textsuperscript{16} Vaughan, Norman, *Perspective on Hybrid learning in Higher Education in International Journal on ELearning*, Proquest, p.84

Jurnal Vision, Volume 6 Number 2, 2017
reading materials and online discussion. Those answering the instruments are only those involved in reading materials, online discussion forum and quiz or assignment.

4. Research Instruments
   a. Survey
      Survey could be regarded as the method of data collection by asking some questions in writing to the selected participants. The survey was made in according to two types of questions: closed and open questions.
   b. Documentation
      Documentation refers to the method where the researcher investigates written object such as student attendance, online reading materials, online discussion forum, scores of quiz and assignment, etc.\(^{17}\)
   c. Observation
      Observation is carried out in the face-to-face classroom and online classroom.

5. Data Collection
   Each of the three data collection such as survey, observation and documentation will produce different kinds of data. The type of data in the survey is collected through the online survey at http://daviqr.com/. The observation will cover the students' participation in the online discussion forum, reading materials and quiz or assignment. The documentation will include student attendance in the online and offline class, scores of quizzes and assignments and reading materials of each session.

6. Data Analysis
   The survey with closed questions will be analyzed based on the percentage. Open questions on the survey, similar to interview in nature, will be analyzed in a more detail description. After that, the documentation including the reading materials, scores of quiz, online discussion forum will be discussed as well. The documentation will complete the data. Afterwards, the analysis of observation will be described.

E. Research Findings

\(^{17}\) Suharsimi Arikunto, *Prosedur*, p. 158
A. The development of Moodle-Based Hybrid learning in
   http://daviqr.com/

   After the ptk-online.org from DBE2 was closed, I initially
   created my own website by buying a domain and hosting. Besides, IAIN
   Walisongo Semarang does not provide Moodle-based e-learning for
   lecturers. Hence, http://daviqr.com/ was created and Moodle was
   installed.

B. Hybrid learning Course in the Subject of Teaching Listening and
   Speaking as a Teaching Model

   As a teaching model, hybrid learning course in the subject of
   Teaching Listening and Speaking is interesting. Many student - 89 out
   of 120 students, participated in the survey. The questions and answers of
   the survey will be discussed here.

   In terms of the components of hybrid online course students
   like is mostly online discussion forum. They can learn more and use the
   easy and interesting method. Besides, they can get clear knowledge. It
   can make them engage with technology closely. It can give them
   knowledge, insight and experience. Students enjoy posting opinions and
   comments in the online discussion. It is more attractive. Reading
   materials are also their favorite components. Students also like the
   assignment and quizzes.

   What students dislike from hybrid learning varies. Some
   students dislike the assignment every week. Also, they have limited time
   to do the quiz so that they have to rush. Besides, students need fast data
   connection to join the hybrid online class. Students dislike reading
   online materials before they do the quiz or test.

   Students also expect help from the faculty. Some of them
   expect more Wi-Fi hotspots to improve the data connection speed. They
   expect the faculty to provide many computers and access to the internet.
   Mostly, students complaint about the internet connection in the faculty.

   Students think that the hybrid online courses should continue.
   They say that the continuation of hybrid courses is useful for them.

   Students suggest that hybrid online courses can be improved
   by improving hotspot at campus and create a new learning model. Some
   students complain about the deadline of the assignment and quiz. They
   want time extension.

F. Conclusion and Recommendations
   A. Conclusions
AIAN Walisongo Semarang does not provide Moodle-based e-learning for lecturers. Hence, http://daviqr.com/ was created and Moodle was installed.

There are some main reasons why most students agree that the hybrid learning course is an interesting course and why they prefer the hybrid online course or the combination between online and traditional classroom. First, the course outline and objectives were made clear. Second, they learned a lot from this hybrid course. Third, the reading materials were clear and informative. Fourth, the level of this hybrid course is just right. Fifth, the total study load of this hybrid course is in proportion to the number of semester credits is just right. Sixth, the amount of their interaction with other students is a little better. Seventh, the quality of their interaction with other students is a little better. Eighth, the amount of their interaction with the instructor is a little better. Ninth, the quality of their interaction with the instructor is a little better and about the same. Tenth, compared to a face-to-face (traditional) class of equal credits, the workload of this online course is somewhat more.

On average they have spent less than 3 hours on this course including reading materials, online discussions, quizzes, and assignments. However, most students have not enrolled in any classes previously and more female than male participated in the survey.

In terms of the components of hybrid online course students like is mostly online discussion forum. What students dislike from hybrid learning varies. Some students dislike the assignment every week. Also, they have limited time to do the quiz so that they have to rush. Students also expect help from the faculty. Some of them expect more Wi-Fi hotspots to improve the data connection speed. They expect the faculty to provide many computers and access to the internet. Mostly, students are complaint about the internet connection in the faculty. Students think that the hybrid online courses should continue.

B. Recommendations

There are some recommendations I should give. First, AIAN Walisongo Semarang must design e-learning for lecturers as many students like hybrid courses. Second, the faculty must improve the quality of Wi-Fi hotspots so that students feel cared on their hybrid online courses. Third, the implementation of hybrid online courses should be give to other lecturers so that students really acquire what they need.
