MAINTAINING EMPLOYEES’ MORALITY TO IMPROVE INTERNAL CONTROL IN THE SHARIA MICROFINANCE INSTITUTION

HASAN MUKHIBAD

Universitas Negeri Semarang

Abstract

Problems of fraud committed by a company’s internal party are hitherto still problematic to figure out, including in sharia microfinance institutions. This research examines the benefit of maintaining employees’ morality for the improvement of internal control in sharia microfinance institution. The object of this research is Anda BMT (sharia microfinance institution in Indonesia). The research uses a qualitative method. The data were obtained by interviewing the managers and twenty employees, and also through field observations for four months. The result of this research shows that the management needs to improve the employees’ morality as it is the key element to prevent fraud act. The efforts made to improve the employees’ morality are like praying together, joining a program of Islamic study once a week, and targeting all employees to read the Quran at least One Day One Juz (ODOJ). Islamic religious activities should be applied to sharia financial institutions in order to improve the employees’ morality and to diminish the act of fraud. It is because the employees who properly carry out Islamic religious activities may reduce the potency of fraud.

Masalah kecurangan (fraud) yang dilakukan oleh pihak internal perusahaan masih menjadi masalah yang sulit dipecahkan sampai saat, termasuk di dalamnya adalah lembaga keuangan syariah. Penelitian ini bertujuan untuk mengeksplorasi model mengembang-

**Keywords**: employees’ morality; internal control; Islamic religious activities; sharia microfinance institution.

**Introduction**

Fraud in banks is still problematic to solve and becomes the most serious problem in business (Hall 2004). Some time ago, several media highlight banking scandals committed by bank employees, leaders, or customers. Even, banking scandals are also committed through cooperation between bank employees and customers. Some banking scandals in Indonesia are such as burglary cases of Citibank costumers, Indonesian State Bank (BNI), Indonesian International Bank (BII), and Victoria Bank (Suprapto 2011).

Some parties consider that banking criminal cases could be minimized by changing the banking operations based on Islamic
principles. The President Director of Sharia BRI, Ventje Raharjo states that Islamic banking is safer from fraud as it is able to maintain sharia principles (Viva 2011). This is because Islamic financial institutions applies sharia values which is based on Islamic law as their operational foundations, including in corporate cultural development which emphasizes on the attitudes of trust (*amānah*), excellence (*ihsān*) and dignity (*falāh*) (Saiful et al. 2011; Triyuwono 2004; Nasution 2009).

However, previous studies discovered that fraud cases still occurred in Islamic financial institutions such as burglary case through fictitious loans in Sharia Mandiri Bank and Sharia Central Java Bank (Merdeka 2011). In addition, the case was also found in another type of sharia microfinance institution called *Baitul Māl wa Tamwīl* (BMT) such as in An Najah BMT and PSU BMT. The fund of An Najah BMT has been corrupted by its employees (Sindo Newspaper, June 26, 2016). Also, misused loans granted by the management and supervisor of BMT have caused to the bankruptcy of BMT (Bisnis.com, July 27, 2015).

Basically, the internal control system developed in sharia banking and BMT is a human-based control system. It means that there is no God’s intervention in such system. So, the paradigm used to establish internal control system still applies conventional concept. Such paradigm is ordinarily used by the Muslims in their economic activity (Hashim 2012).

Meanwhile, the basic paradigm used to develop Islamic-based control system is a control system which involves God in any aspect of life. It is because the universe created by God is a mandate from Him and as a means of happiness for the life of human being to gain prosperity both materially and spiritually. It means that according to Islamic view, the whole universe (including job, title, position, and others) is a trustworthiness given by God and must be counted for by all mankind before God.
Every Muslim must believe on the accountability in the hereafter that everything is accountable before God. In other words, the mankind should accomplish their missions well in this world (al-Quran, al-Nisa; al-Anfal). The result of every human’s responsibility then determines whether human will live happily in the hereafter or not.

The aforementioned explanation shows that fraud, in fact, still occurs in Islamic financial institutions. Yet, the research on fraud in Islamic financial institutions is still rarely conducted. Some studies carried out by Nor, Wan, Fathi, & Puspitasari (2017) found that the case of fraud can be influenced by some factors like gender, age, position and religiosity. A solution to prevent the potency of fraud in Islamic banking is by doing review and improving internal control (Rahman and Anwar 2014). An indicator for internal control is corporate culture. More specifically, the shape of corporate culture can decrease the potency of fraud (Biggerstaff, Cicero, and Puckett 2015). In addition, (Salin, Ahmad Saiful Azlin Puteh; Ab Manan, Siti Khadijah; Nawaiwi 2017) stated that Islamic ethics can be a solution to reduce the fraud in Islamic banking.

This research was conducted to develop a model for the improvement of employees’ morality which is base on the Islamic law and could be properly used in the Islamic financial institutions. This research is necessarily conducted as the previous researches have not developed such model. And, good morality is necessary to reduce fraud that still happens in Islamic financial institutions. It is because the good morality will improve the internal control system and will further decrease the fraud.

This research was conducted with a preliminary study on the implementation of Islamic ethics and the potency of fraud in 10 BMTs. Subsequently, the author determined which BMT that has good ethical implementation and that has lowest fraud
potency. Finally, the selected BMT becomes the object of this research.

The object of this research is Anda BMT in Salatiga, Central Java, Indonesia. Anda BMT is considered as the object of study as it has good religious development, financial performance, and high-level internal control system based on the previous research.

To achieve the objectives of this research, the author uses qualitative method by applying case study methodology. The case study-based research uses empirical evidences of one organization or more while the author tries to solve the problems and contexts. An interpretative approach is used as this research focuses on stories and arguments related to a phenomenon (Saraswati 2012). Person to person interview was conducted to gain information from the informant (Merriam 2009).

The method of interview by using semi-structured technique is applied to obtain the research data. The research informants are general manager and financial manager and employees. Two informants are determined by management since this research is related to management policy. The other informants are the employee to validate the data obtained from the management party. The interview is not conducted at the same time to ensure the validity of the collected data. In addition, to validate the data, the author uses triangulation method that the data is considered valid if supported by other data, such as observation and statements from other informants (Creswell 2009). Valid data will be interpreted, reconstituted, and concluded (Yin 2011).

**Baitul Māl wa Tamwīl**

*Baitul Māl wa Tamwīl* (BMT) is a sharia microfinance institution. It consists of two phrases *baitul māl* means house of wealth and *bait al-tamwīl* means house of finance (Kustin 2015). BMT is sharia microfinance institution which applies Islamic
law (sharia) as the general principles (Daniel and Saeed 2013). The core value of Islamic law is the prohibition of giving interest (riba). According to Kustin (2015), BMT has two functions. The main function is to have a good financial and social performance. Therefore, many studies show that BMT has a positive effect on society, especially in economic empowerment of small communities (Sakti 2013).

BMT business actors have many problems. The main problem faced by BMT is poor business sustainability (Abdul Rahman & Dean, 2013; Alaeddin & Anwar, 2012) this evokes anxiety that microfinance institutions will not be able to stay true to their social objectives if they are to access commercial capital. A breakthrough in Islamic micro finance in the form of Islamic cash endowment through cash waqf is aiming to ensure the outreach is still prioritized. This paper analyzes the grass root fact in a case study of an Islamic microfinance institution (MFI; Abdul Rahman & Dean, 2013). The poor business sustainability is resulted from various problems. Range (2004) reveals that the biggest problem faced by BMT is the weakness in supervision which causes in poor performance and leads to bankruptcy.

Manan & Shafaii (2015) argue that the poor business sustainability of sharia microfinance institutions is resulted from the poor risk management. In addition, the internal control system of BMT is also weak that results in poor business sustainability (Mukhibad 2014). Thus, good risk management can reduce risks without diminishing its potency to gain profits and BMT’s sustainability can also increase.

**Islamic Paradigm**

Islam is a perfect religion (al-Quran, al-Maidah). Islam does not only teach how humans worship God, but also manages how they should interact with others. Any kind of relationship
among men has been set up in Islam, including how the Muslims perform their economic activities. In the Quran, God has said that He has set business rules for human beings (Salin, Ahmad Saiful Azlin Puteh; Ab Manan, Siti Khadijah; Nawawi, 2017; Hashim, 2012).

Some researchers have formulated several Islamic paradigms that should be applied by the Muslims in performing their economic activities. One of them is Islamic work ethics (Syed and Ali 2010; Ali and Al-Owaihan 2008; Khan et al. 2015; Ali and Al-Kazemi 2005; Ali 1992; Beekun 1997). Previous researches frequently use Islamic work ethics as an indicator to measure employees’ religiosity (Amaliah, Aspiranti, and Purnamasari 2015; Hejase, Hamdar, and Raslan 2014) which is then connected to the company’s performance (Wisker and Rosinaite 2016; Zahrah et al. 2016; Hadisi 2014). Religion can elevate self-control, influence how goals are selected, pursued, and organized and can be self-monitoring tool (Mccullough and Willoughby 2009). However, some previous studies show that a research aiming to develop a model of internal control system based on Islamic paradigm needs to be conducted.

**Internal Control System Based on Islamic Paradigm**

Fraud is a crime and an indicator that should be avoided. Tuanakotta (2007) considers that to reduce fraud, a company must implement an effective internal control system. Similar solution is also provided by Committee of Sponsoring Organizations of Tread way Commission (COSO) by issuing 26 fundamental principles for the implementation of internal control system. Those 26 fundamental principles are connected with five key components of internal control system, such as: (1) environment control; (2) risk assessment; (3) control activities; (4) information and communication; and (5) monitoring (Goetsch and Davis 2014).
Among the five components of internal control, environment control is the most emphasized one by COSO (Doyle, Ge, & McVay, 2007; Ge & McVay, 2005; Hanim Fadzil, Haron, & Jantan, 2005; Hall, 2004). This is because environment control is a major factor used to prevent the risk of misstatement of financial report (Berg and Cassells 1992; Doyle, Ge, and McVay 2007).

The aforesaid hypothesis is in line with the research results conducted by (Puspasari 2012) who finds that there is interaction between individual morality and internal control. The conditions of internal control element do not influence individuals with high morals level who tend not to commit fraud in accountancy. While, individuals with low morals level tend to commit accountancy fraud since the condition is not internal control element. Financial scandals occurring in a company start from ineffective governance issues characterized by the inexistence of ethics within the company (Salin, Ahmad Saiful Azlin Puteh; Ab Manan, Siti Khadijah; Nawawi 2017).

Bologna & Lindquist (1995) indirectly state that ethics, honesty, is required to reduce fraud. The statement is indirectly expressed in the form of figurative i.e. “some people are honest all the time, some people (fewer than the honest ones) are dishonest all the time, most people are honest all the time, and some people are honest most of the time”. This statement indicates that the attitude of someone who is sometimes honest and dishonest has potential to commit fraud. Therefore, re-establishment of an honest culture is very important (Cohn, Fehr, and Maréchal 2014).

In the research aiming to identify the causes of fraud, Albrecht replaces rationalization aspect in fraud triangle theory with personal integrity. Rationalization is a justification of fraudulent behaviour because the employee lacks personal integ-
MAINTAINING EMPLOYEES’ MORALITY ...

Rationality or moral reasoning (Abdullahi and Mansor 2015). It means that rationalization is more influenced by ethics. Ramamoorti (2008), states that rationalization and pressure are the factors which cause accountancy fraud based on subject’s psychological condition. Dorminey, Fleming, Kranacher, & Riley Jr, (2012) state that rationalization and pressure are the subject’s characters to commit accountancy fraud which may not be observed as it is impossible to know what the subject is thinking when committing accountancy fraud. From the statement above, it can be concluded that the accountancy fraud has relationship with ethics (Krummeck, 2000; Liyanarachchi, 2009).

Chapra & Ahmed (2002) reveals that there are some factors influencing the success of Islamic economic system during the glory of Islam by creating a corporate environment which ensures employees to behave honestly and efficiently. The company success is indication of the company performance as the result of the implementation of Good Corporate Governance (GCG) and shows fraud absence. Thus, we can conclude that upholding trust (amānah) as one of Islamic culture is indispensable for reducing fraud. In more details, Saiful et al. (2011) explain that the company scandals and cases may be avoided through the right approach with religious perspective, particularly Islam.

Ahmad (2004) explains that in Islam God created human being to be a caliph in the world (al-Quran, al-Naml: 62). It means that human beings are not only the caliphs (in this world) but also the agent of God or God’s servant and therefore the wealth of human beings must be derived from lawful manner based on Islamic law, not coming from any effort by violating moral values such as stealing, committing fraud and any other injustice acts which break Islamic law (Ahmad, 2004).

Every human being bears responsibility in this world. In Islam, humans have horizontal (hablun min al-nās) and vertical
(hablun min Allāh) responsibility. The consequence is human morality must conform to God’s injunction. Beekun (1997) defines that Islamic ethics as a set of moral principles distinguishes whether something is right or wrong according to Islamic perspective. Therefore, Islamic Work Ethics is defined as a set of moral principles distinguishing right and wrong doing from Islamic perspective (Rokhman 2010).

Results and Discussion

One of indicators for internal control systems is an environmental control and among the indicators for environment control is cultural control. The culture developed by a company will influence employees’ attitude to obey what is legalized and to stay away from all prohibitions. And one of the ways to develop corporate culture is religion. Religion has behaviour control for its adherent. Such control, if it is continually obeyed will later be a religious-based culture.

Based on the observation, it shows that there is one most outstanding BMT in implementing Islamic principles that is Anda BMT in Salatiga, Central Java, Indonesia. The implementation of Islamic ethics which supports the establishment of corporate culture and company internal control system is conducted with the following methods:

First, in the process of recruitment, BMT emphasizes on soft skill values of the applicants. Morals value becomes the main factor for the acceptance of the applicants. BMT concerns more on prospective applicants who bear good manners instead of those who have great competence but low morality. Mr. M, the financial manager said:

“In our recruitment system, we conduct written test and interview. For administration staff, a practical test is also given. For marketing staffs, our marketing division will do an assessment
on marketing skills. Yet, morality is the most important aspect for us. The applicant with good morality will get more point. So, the primary factor is morality, then followed by other competencies. While, for working performance, we will give them motivations. For the assessment of applicants’ religious value, we will concern on their regularity in reading the holy Quran. And, during the interview, we also ask them concerning their activities in mosque, whether they take part actively in religious activities or not. The latter also becomes our main standard.”

Similar statement is also given by Mr. S as the general manager.

To obtain prospective employees with good attitude, BMT opens opportunity to its employees to recommend their relatives, friends or other acquaintances to apply. It is because they have been well known through its employees so that it eases BMT to see the background of the applicants, mainly related to their religious background. Mr. S, the general manager, gives statement as follows:

“When we need new employees, we will inform first to our employees. Perhaps, they have relatives, friends or acquaintances who are interested in working at BMT. This is what we believe and we could know them better. We undoubtedly know their background, daily life, and the most important is related to their religious aspect. But, If we make open recruitment, we might not know if the applicant is diligent in doing five-time obligatory prayers, whether they regularly go to the mosque, whether they frequently attend religious teaching, including their competence in reading the holy Quran.”

The statements show that during recruitment process, BMT gives many concerns on the candidate with good religious background. Some indicators used to assess their religious obedience are doing five-time obligatory prayers, actively joining mosque activities, regularly attending religious teaching, as well as regularly reading the holy Quran.
After the recruitment of new employees, BMT later needs to improve their soft skills by regularly carrying out a program of religious teaching conducted once a week and religious discussions every month. Here are statements given by Mr. M:

“We have routine religious teaching every week and held in all our branches. But, every branch has different schedule like on Friday afternoon or Thursday morning at 8.00 a.m. to 09:00 a.m. The program is for religious teaching only. Any discussion related to working, marketing target, and others are not permitted to discuss. Then, for reading the holy Quran, we have a program called MFA (Major Family Assembly).”

Similar information is also given by Mr. SP. Based on several interviews before, BMT usually maintains the employees’ religious awareness by regularly conducting religious teaching weekly. The religious teaching is conducted in every branch with different schedules. The program is necessary and all employees must join. It means that all the employees in one branch are obliged to join the religious teaching held by the related branch office. Once, the religious teaching is held, they are supposed to discuss Islamic teaching and not allowed to discuss anything else related to the job.

Another activity to improve employees’ good attitude is by reading the holy Quran. Anda BMT states that in addition to achieving financial target and customer deposits, all employees are also given a daily target to read the Quran. BMT gives a target to finish reading the Quran at least one day one juz (section) for every employee. Once they finish reading the Quran, they have to give report to BMT Management.

Last but not least is the program of conducting daily five prayers together on time. The study found that Anda BMT office has a mosque to perform praying. For the branches which are next to the mosque, the employee must pray in the mosque. When the time for *duhur* prayer is coming, the muezzin calls
for prayer in order that all employees and customers go to the mosque and pray together, except those are still giving services to the customers. It is also implemented to Ashar prayer as well.

“If the office is close to the mosque, praying together is our main priority. But, if the office is far away from the mosque, we provide small mosque. So, when duhur and Ashar prayer are coming, the muezzin will be ready to call for prayer. Yet, the services are still given to our customers. They may not join praying together. But, for those who are not giving services to the costumers are obliged to join praying together.”

Based on the aforementioned facts, we can see that BMT really emphasizes on the religious aspect of its employees as a major factor to construct institution’s internal control system. The management believes that good religious awareness will result in good behaviour of the employees to act in accordance with Islamic teaching. It means that good morality will produce trustworthiness and sincere attitude upon duties, facilities, entrusted position, as well as having *falāḥ*-oriented vision. Trustworthiness (*amānah*), excellence (*ihsān*) and dignity (*falāḥ*) are the attitudes highly emphasized as a working culture in Islamic financial institutions (Saiful et al., 2011; Triyuwono, 2004)

If associated with COSO model, the establishment of employees’ good religious awareness will influence the improvement of internal environment control. Good internal environment control will improve internal control system. Furthermore, a good internal control system will influence to the improvement of BMT performance (Njeri 2014; Muraleetharan 2011; Dineshshkumar and Kogulacumar 2011). Concisely, religion can be a proxy to strengthen the ethical norms within the community of the company, and to examine whether such norms could reduce unethical corporate behaviour (Grullon, Kanatas, and Weston 2009). Good morals improvement is the key to prevent the fraud (Salin, Ahmad Saiful Azlin Puteh; Ab Manan, Siti Khad-
ijah; Nawawi, 2017; Puspasari, 2012). And, religion especially Islam is the important source of ethics (Mukhibad 2014). The obedience of the employee toward Islamic ethics is needed to reduce fraud act (Saiful et al., 2011; Salin, Ahmad Saiful Azlin Puteh; Ab Manan, Siti Khadijah; Nawawi, 2017; Ahmad, 2004; Nasution, 2009).

This is also in accordance with the statement of Saiful et al., (2011) that company scandals and problems can be avoided through the appropriate approach generally by implementing religious teaching, particularly Islamic teaching. In addition, these finding also strengthens the God saying in Surah Al Maidah stating that Islam is the perfect religion. “.... This day I have perfected your religion for you and completed My favour upon you and have chosen Islam as religion for you....” (al-Quran, al-Maidah: 3).

Based on the result, the model for maintaining employees’ morality can be seen at figure 1.

*Figure 1.*

*The model of maintenance of employee ethics*
Conclusion

This research finds that the implementation of internal control system must emphasize on the religious aspect of the employees. The employee with good religious awareness will result in good behaviour which conforms to Islamic law (sharia) and could create the effectiveness for internal control system in BMT. To improve the employees’ religious awareness, BMT organizes weekly program such as Islamic Study, praying together, and ODOJ. Besides, BMT also applies certain standard that religious aspect of the applicants or candidates becomes the main factor in the process of recruitment.

Finally, the author suggests that religious aspect of the employee must be the main concern for the establishment of internal environment control in the Islamic financial institutions. The institution should utilize religion especially Islam as the model for effective company management, especially in Islamic-based financial institutions.
